HYDE GROUP INTRODUCES THE CAULK AID AT THE NATIONAL HARDWARE SHOW

—One Tool Removes and Reapplies Caulk for a Professional Finish—

SOUTHBRIDGE, MA – Introduced by Hyde Group at the 2017 National Hardware Show in Las Vegas, the HYDE® Caulk Aid is a multi-purpose caulking tool that allows anyone to refresh old caulk with a single tool and minimal effort.

Replacng caulk is one of the most common jobs around the house, and Hyde Group designed this tool to streamline the process. While most caulk tools either remove old caulk or help to apply a new bead, the Caulk Aid allows you to do the entire job and ensure a professional finish.

To do this, the Caulk Aid was designed with some obvious as well as some hidden helpful features. On one end of the tool are sharp, high-impact plastic blades designed to shave old caulk clean from tile or window mullions. A sharp point hidden within the tool is then used to dig any remaining caulk out of crevices.

Once the old caulk is removed, the caulk tube cutter on the back of the tool slices open the tube of replacement caulk — and the new caulk bead, once laid, can be smoothed to a neat and consistent profile with the padded end of the Caulk Aid. The Caulk Aid lays down a perfect bead of replacement caulk with no messy residue, no edge marks — and no contaminating the uncured caulk by using your fingers!

This is the perfect tool for refreshing caulk around tubs, showers, trim, sinks, and windows. It can be used with silicone, latex and acrylic caulk, and wipes clean when done.
