The HYDE® Pivot Nozzle Wand

For Pressure Washers: The Power Is in the Pivot

SOUTHBRIDGE, MA – No more bending, stooping or stretching to get the right angle or get out of the way of the spray. The new HYDE® Pivot Nozzle Wand from Hyde Tools will turn any pressure washer into an easier, more versatile cleaning machine.

Selected for numerous awards at the National Hardware Show in May, this new technology offers what no other pressure washer wand has – a pivoting nozzle that lets you wash high, low

and hard-to-reach areas without splash-back or contorting your body into tiring or dangerous positions. To watch video or link to retailers, go to hyderewards.com.

Because the tip pivots, you can step back from the water into a comfortable, balanced position while keeping the tip at the optimal 90° angle to the surface. Every job is faster and more efficient. The wand also helps users avoid common stress injuries, fatigue and accidents resulting from the use of high pressure while on a ladder. In lieu of climbing, you can reach high surfaces from the ground, pivoting the

nozzle to achieve a correct angle and activating the pressure washer using the remote trigger.

The HYDE® Pivot Nozzle Wand is currently available for gas-powered pressure washers, with styles to fit either M22 or 1/4-inch gun fittings. A compact new model for electric pressure washers will be available in the fall. For further information, visit hyderewards.com.
